CASM

Computer Aided Security Management

The UK's first fully integrated cloud based management information system and an important aid to achieving your paper free environmental policy.

Company Overview

VeriFi is a family owned and operated business established in 1998 serving the data compliance and management information requirements of the security and facilities management sectors.

Typically our customers are Landlords, Managing Agents, Manned Guarding Service Providers, HM Courts and Tribunal Service and the Prison Service.

We operate throughout the UK and provide product and services for locations as diverse as some of the most well known buildings on the London skyline, Shopping Malls, Multi Tenanted Office Buildings, Sports Stadia and High Street Retailers.

VeriFi EIDOS is the UK's first fully integrated cloud based management information system and an important aid to achieving your paper free environmental policy.

EIDOS CASM (Computer Aided Security Management)

The adoption of digital management information technology by the guarding industry has been piecemeal resulting in a mass of paper based records, spreadsheets and stand alone web based apps.

This inefficient disjointed approach results in significant archive management and retrieval costs together with frustration caused by the delay in gaining access to information.

VeriFi EIDOS is the UK's first fully integrated cloud based management information system and an important aid to achieving your paper free environmental policy.

EIDOS is cloud based enabling real time access to management information by all nominated stakeholders with internet access.

Daily Occurrence Book

The EIDOS Activity Log replaces the traditional paper Daily Occurrence Book and acts as the central hub for the other modules.

Patrol Verification

The EIDOS Patrol Verification module provides real time patrol logging along with a host of other useful features.

Asset & Key Management

The EIDOS Asset & Key management module is the paperless solution to tracking and managing assets saving time and money.

Visitor Management

The EIDOS Visitor Management module streamlines the process of booking visitor & contractors on to site.

Persons of Interest

The EIDOS Persons of Interest module is an important tool for managing distributed images of individuals suspected of criminal activity, hostile reconnaissance, anti-social behaviour or banned from the area of surveillance.

File Storage

The EIDOS File Storage module is a library for reference documents such as assignment instructions and equipment operating information.

These modules can be added initially or over time as the need arises. An optional Dashboard can be configured to provide management statistics.

Activity Log **DOB**

The EIDOS cloud based Activity Log replaces the traditional paper Daily Occurrence Book and acts as the central hub for a range of optional modules.

Features

- ✔ Accessible by all Authorised Stakeholders
- ✔ User Name & Password Verification
- ✔ Real Time Reporting
- ✔ Spell Check
- ✔ Legible Reports
- ✔ Search by Subject or Date
- ✔ Instant Archive
- ✔ Automatic Time & Date Stamp
- ✔ SMS & Email Notifications
- ✔ Assignment Instructions
- ✔ Excel Reporting

Accessible by all Authorised Stakeholders

Can be configured for either a single or multiple sites that can be accessed from anywhere with internet access.

Fully Configurable

Easily configured with site specific Subject Headings, Assignment Instructions and prompts on details required for an entry.

File Storage

Upload and store images and documents associated to an entry.

Task Prompting

Prompts can be configured to be automatically displayed reminding an operator to carry out pre-defined tasks such as "Fire Alarm Checks".

SMS & Email Notifications

In the event of a particular 'Subject Heading' being selected or a 'Task' not being completed the system can automatically broadcast an SMS Text & Email alert.

Secure

Entries can be configured for user password verification and once completed entries are locked down, serially numbered and time & date stamped.

Persons of Interest

The EIDOS Persons of Interest module is an important tool for managing distributed images of individuals suspected of criminal or terrorist activity, hostile reconnaissance, anti-social behaviour or banned from the area of surveillance.

Formal cradle to grave management of suspects images is vital in order to avoid Data Protection breach issues.

Features

- ✔ Documented justification for processing images
- ✔ Watermarking of images with a Unique Reference Number
- ✔ Portal enabling access to images by tenants and other registered stakeholders
- ✔ Sharing Interface with EIDOS Guard Patrol & Activity Log
- ✔ Routine prompt to review archive retention
- ✔ Record of image retrieval / deletion

Formal Justification

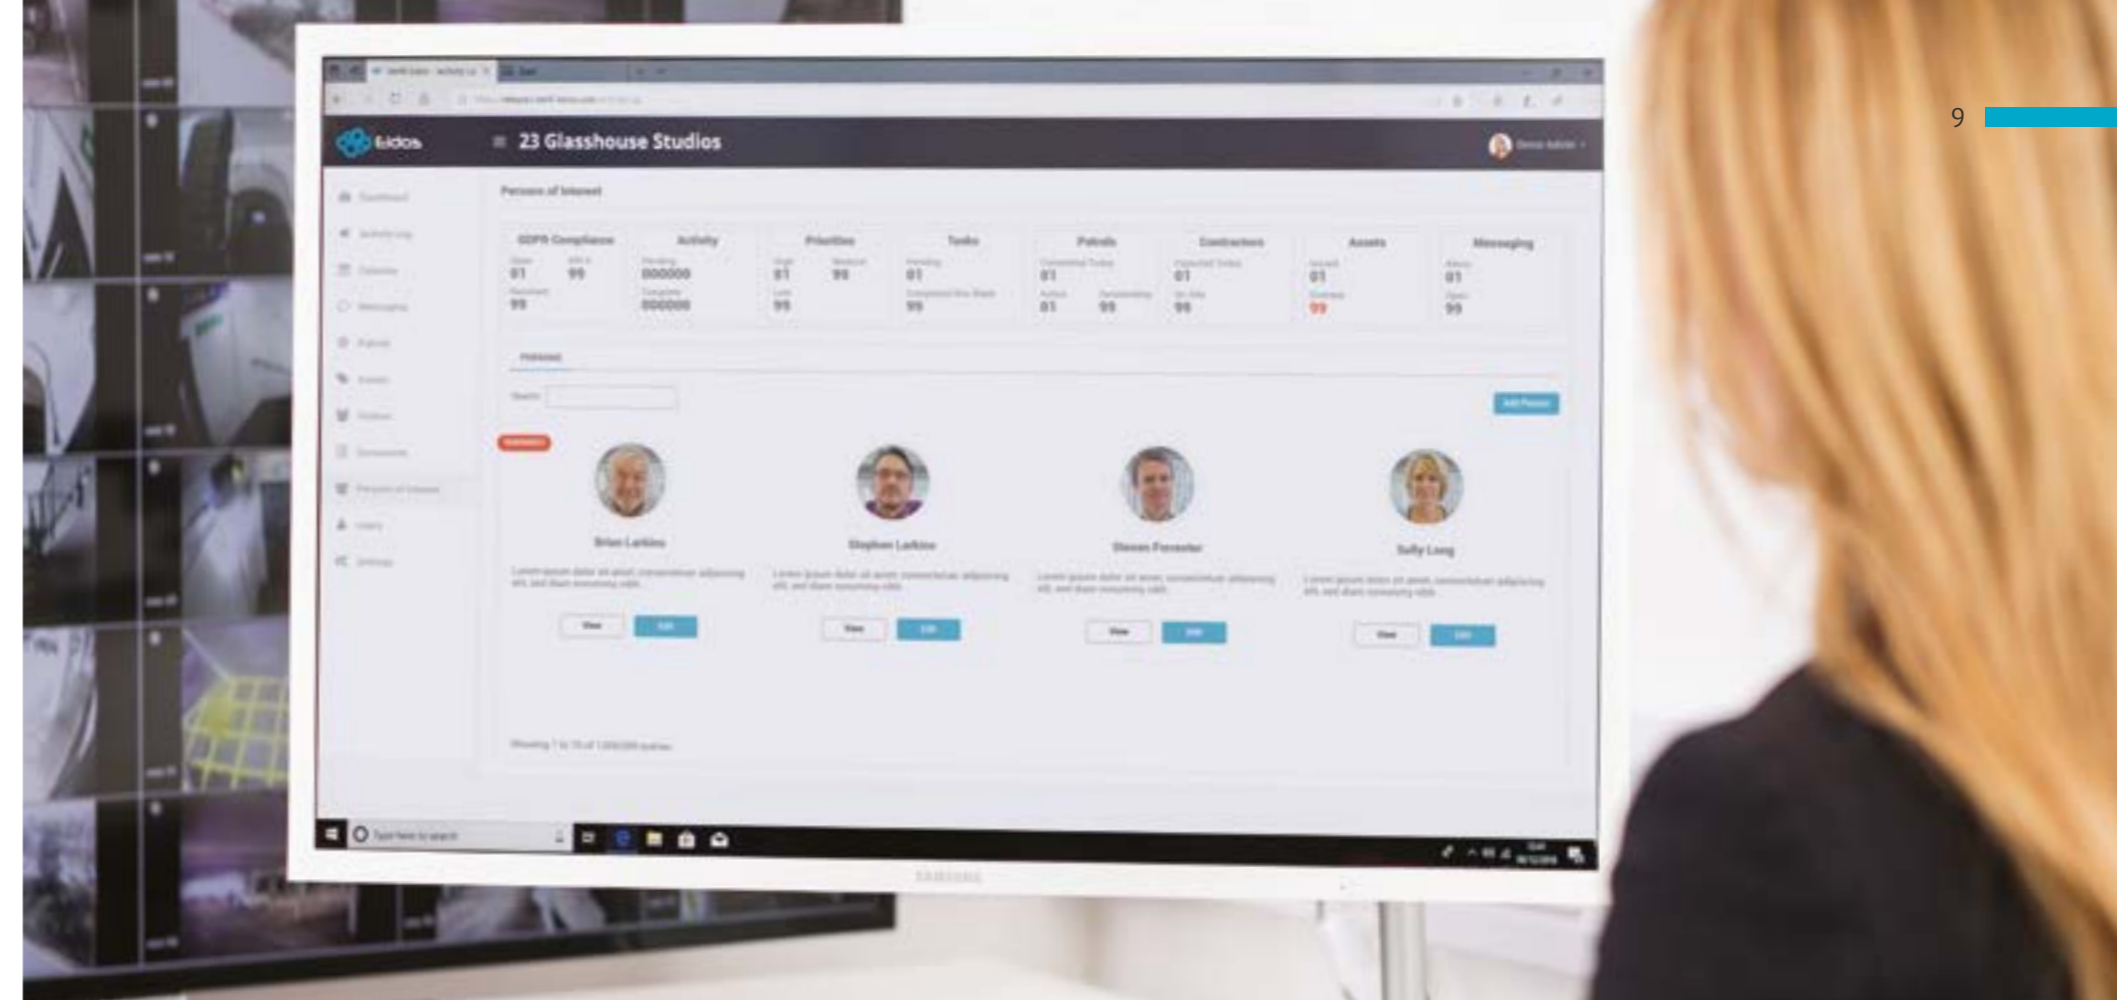

The reason for including a persons image in the database is a data protection requirement that must be complied with. Without this step it is not possible to upload an image. This safeguard is designed to prevent the casual unauthorised distribution of peoples images.

Secure Distribution

Images are password protected and may be viewed by the security team and other authorised stakeholders on their PC or Smartphone. Any printed copies are watermarked with a Unique Reference Number and bear the text 'NOT TO BE DISPLAYED IN PUBLIC VIEW issued by (Name) on behalf of Name of Data Controller for (Name of Company)'

Tenant Portal

Tenants who are registered as Data Controllers with the Information Commissioners Office (ICO) may be allowed access to the Persons of Interest database subject to a data sharing agreement included in the EIDOS process.

Security Team Sharing

Persons of Interest interfaces with the EIDOS Guard Patrol and Activity Log enabling distribution of images to the security team who can also capture and transmit images for approval and entry into the database.

Right to be Informed

Right to be Informed does not apply where video images are employed for the lawful basis of alerting interested parties to the presence of a person of interest for the public good and security of commercial interests as directed by the Data Controller for the premises.

Archive Retention

The need for retention must be routinely reviewed and all copies must be permanently deleted or otherwise destroyed when retention can no longer be reasonably justified. EIDOS Persons of Interest prompts and records routine archive reviews.

Patrol Verification

The Eidos patrol verification system provides real time patrol logging along with a host of other useful features including Fault & Incident Reporting and Task Attendance.

Using a combination of Smartphone and NFC technology the Eidos Patrol System is an extremely flexible alternative to traditional patrol products.

Features

- Multiple Patrol Routes
- Schedule Patrols
- Real Time Reporting
- Fault & Incident Reporting with Photo Upload
- Live Notifications
- Task Attendance
- Lone Worker
- Optional Asset Logger & Persons of Interest Module

Multiple Patrol Routes

Create multiple patrol routes with the option for them to be defined or ad-hoc.

Schedule Patrols

Schedule specific times & dates when patrol should be performed.

Real Time Reporting

View live updates to patrol status.

Activity Log

Receive notifications and log faults & incidents plus upload supporting images directly to the Activity Log.

Tasks

Create & perform specific tasks associated to a point with the option of multiple choice questions and additional comments.

Lone Worker

Automatically sends SMS in the event of a fall or inactivity.

Asset Tracking

EIDOS Asset & Key management software is the paperless solution to tracking and managing assets saving time and money.

Items registered in the EIDOS Inventory such as; Keys, Radios, PPE etc. that require tracking are fitted with NFC tags. Using either a tablet & App. or desktop NFC reader items can be booked out to a recipient logging their name, contact details and expected return date and time.

The system can be configured to alert the recipient when the item is due for return by SMS Text Message or Email. Items not returned are flagged as "Overdue" prompting the Operator to resolve the issue.

Features

- ✔ Instantly know who's in possession of assets
- ✔ Know when assets are due to be returned
- ✔ Optional automatic SMS notifications
- ✔ Real Time Reporting

What you've got

EIDOS can be set up to include your entire inventory, everything from keys to laptop computers to fire extinguishers and tenants bikes.

Where its kept

The location of assets is recorded and a check can be incorporated into EIDOS guard patrol

Who had it last

Single or multiple assets with EIDOS NFC tags are attributed to the receiving individuals name when booked out and back in using any computer device including smartphones.

What's overdue for return

Text messages are automatically sent prompting the return of items when due. Overdue returns are flagged in the EIDOS activity log.

Lost and Found

Found items, keys in particular can be reunited with the site via www.foundkey.info an EIDOS operated facility that rewards finders.

Information fields

Inventory data can include; Make, Model, Manufacturers part number, Location, Commission and Expected Decommission Dates, Capital value, Insurance data, Photo image, Issue instructions and User notes.

Visitor Management

The EIDOS Visitor software replaces the traditional visitor book with a streamlined process for booking in visitor & contractors to site. Visitor details are securely stored and provide real time information and reports.

Repeat visitors using the App, need only enter their mobile number for the system to recognise them and pre-fill the required fields. Capture visitor photos for printing passes with the option to issue access control passes via the EIDOS Asset Tracking module.

Features

- ✔ Self Check In Option with Tablet
- ✔ Photo Visitor Pass Badges
- ✔ Tenant Portal
- ✔ Host Notification
- ✔ Real Time Reporting
- ✔ Asset Tracking Integration

Self Check In

The system can be configured for Front or Back of House with the option for Visitors to self check in using the EIDOS app, and tablet.

Visitor Pass Badges

Visitor Pass Badges are easily produced bearing the visitors photo ID, captured by the visitor tablet or desktop webcam. Printed bearing bespoke Heath & Safety and Data Protection information.

Tenant Portal

Tenants can be given access to the system via their own portal allowing them to pre-book Visitors and Contractors on to site.

Host Notification

Notify hosts when visitors arrive on site with the optional SMS text notification feature.

Emergency Evacuation

A list of visitors on site is instantly available either on screen or as a print out with the option to download a range of other reports as required.

Asset Tracking Integration

Works seamlessly with the EIDOS Asset Tracking enabling keys and other assets to be securely issued and recovered.
